

My First Mobile app with IONIC5

Ionic is a framework for easily creating and distributing mobile / tablet (and even desktop) applications.

To do so, it combines the power of **Angular** , which makes it possible to build web applications efficiently, and that of **Capacitor** (the replacement for Cordova), to give access to the native functionalities of mobiles / tablets and to be able to distribute the application on the iOS AppStore and the Android Play Store .

Details

Course duration: 35 hours | laptop required.

Price: 1000 dinars

For who?

- 18 and over with a bachelor's degree or a BTS.
- People who want to retrain or strengthen their programming knowledge.
- Passionate about creating hybrid mobile application, and giving users beautiful experience.
